

AMENDMENTS TO THE CLAIMS:

The following list of claims will replace all prior versions, and listings, of claims. Please amend the claims as follows:

1. (Currently Amended) A method for the selective disassociation of at least one glycosaminoglycan biological entity bound to a plasma polymerized surface of an organic monomer including an allylamine, said method comprising:
contacting said surface with at least one agent having a salt concentration of about 500 mM NaCl to about 2 M NaCl, wherein said agent provides for selective disassociation of said bound glycosaminoglycan entity from said plasma polymerized surface.

2.-5. (Cancelled).

6. (Currently Amended) A method according to Claim 1 ~~2~~ wherein said ~~carbohydrate~~ glycosaminoglycan is a sulphated biomolecule.

7. (Currently Amended) A method according to Claim 1 ~~5~~ wherein said glycosaminoglycan is selected from the group consisting of: hyaluronan; dermatan sulfate; chondroitin sulphate; heparin; heparan sulphate; and keratan sulphate.

8.-11. (Cancelled).

12. (Previously Presented) A method according to Claim 1 wherein said surface comprises a plasma polymer of a volatile acid.

13. (Previously Presented) A method according to Claim 12 wherein said surface comprises at least 5% of said volatile acid.

14. (Previously Presented) A method according to Claim 1 wherein said surface comprises a plasma polymer of a volatile alcohol.

15. (Previously Presented) A method according to Claim 1 wherein said surface comprises a plasma polymer of a volatile amine.

16. (Previously Presented) A method according to Claim 1 wherein said surface comprises a mixture of volatile acid and volatile hydrocarbon.

17.-25. (Cancelled).

26. (Previously Presented) A method according to Claim 6 wherein said sulphated biomolecule is selected from the group consisting of: dermatan sulfate; chondroitin sulphate; heparin; heparan sulphate; and keratan sulphate.

27. (Cancelled).

28. (Previously Presented) A method according to claim 1, wherein said agent has a salt concentration of about 500 mM NaCl to about 1 M NaCl.

29. (Previously Presented) A method according to claim 1, wherein said agent has a salt concentration of about 750 mM NaCl to about 1 M NaCl.

30. (Cancelled).

31. (Previously Presented) A method according to claim 1, wherein said agent has a salt concentration of about 500 mM NaCl to about 750 mM NaCl.
